

# Diabetes Advancing Care Course

## Course information

This course is suitable for anyone who would like to advance their knowledge and understanding of the diagnosis and holistic management of diabetes. It covers different types of diabetes, explains the pharmacological and lifestyle interventions that can optimise outcomes with reference to glycaemic control, blood pressure and lipid management and includes case studies to bring the theory to life. Sections include mental health and special cases such as learning disabilities and the frail elderly. The course counts as 45 hours of CPD for your revalidation.

## Learning Outcomes

- Diagnose those with and at risk of diabetes
- Implement evidence-based strategies to improve outcomes
- Minimise complication risk through early detection and management
- Undertake a holistic person-centred review
- Support the person living with diabetes with their ongoing self- management

## Outline content

The focus of the course is on how to recognise those with, and at risk of, diabetes and prevent complications through an evidence-based approach to behaviour change, lifestyle changes and the appropriate use of medication. This course encourages participants to approach diabetes care in a person-focused and collaborative way so as to reduce the impact of diabetes on quality of life and the use of healthcare resources.
